"The world's smartest wireless intruder alarm system"

SECURITYGUARD III

Securityguard III is without peer, it's that simple! Designed specifically to fulfil the shortcomings of its wireless competitors.

Securityguard packs a powerful punch under its sleek and functional exterior.

THE POWER AND THE BEAUTY!

The Securityguard III main unit is fully self contained with an onboard PIR sensor, scrolling LED user display, a high volume onboard siren and anti-tamper protection.

The main unit is constructed with an interlocking double shell which is designed to provide high physical protection against attack.

For peace of mind day and night, SECURITYGUARD III can be monitored by a central monitoring station to provide 24 hour response and even two-way voice feedback for alarm verification.

HIGH VOLUME SIREN

SCROLLING LED DISPLAY

4 MONTHS BETWEEN CHARGING MAIN UNIT

ONBOARD PIR SENSOR

ADD UP TO 23 ADDITIONAL SENSORS AND RADIO KEYS

READY FOR CENTRAL STATION MONITORING

SecurityG

"The world's smartest intruder alarm"

REMOTE CONTROL

Your personal remote controls, the Securityguard Radio Keys or Radio keypads are your keys to the system.

Each Radio Key has four buttons for Arming, Disarming, Panic and AUX.

Your installer can optionally setup the AUX button to open your garage door or even turn on the lights, sprinklers or virtually anything that can switch on or off!

))) "System is Armed."

AT WORK OR HOME DAY OR NIGHT

Securityguard III has an operating mode to suit all situations. ARM the system when you leave the premises and Securityguard will sound the alarm when it's needed.

DISARM when you arrive - in fact you can Disarm from outside the premises and use your Radio Key to open the garage door (optional setup).

For peace of mind overnight, use your Radio Key to switch on Home Mode which lets you arm pre-defined zones in your home. For example, use your Radio Key from your bedside to arm only the downstairs sensors to keep watch overnight.

PERSONAL ALARM

Every Securityguard III Radio Key has a Panic button to sound the alarm with a single press.

The Panic alarm helps deter would-be attackers or suspicious characters with an ear-splitting siren and if your system is monitored, it will send an alarm message to your central monitoring station.

The Securityguard III Personal Alarm provides peace of mind day and night.

))) "Warning! Panic alarm from key one."

Securityguard four button Radio keys are compact and fully waterproof powered by a long life Lithium battery for years of maintenance-free operation.

Guard III

Smartest wireless
alarm system™

Add Wireless smoke detectors and door/window switches for added protection.

Add extra wireless motion sensors in the Lounge, Bedrooms, Hallway and any room worth protecting.

OPEN THE GARAGE DOOR
... from the safety of your car
with the AUX button option

DISARM THE SYSTEM
... without a complicated keypad -
no PINs to remember

The best mounting locations for motion sensors are in the corners of a room facing towards the door and away from windows.

The Securityguard main unit can be installed out of the way in a utility room such as the laundry, closet or pantry.

EXTRA SENSORS

Securityguard III can have up to 24 wireless Sensors and Radio Keys including the sensor built into the main unit.

You can add extra wireless motion sensors, wireless door and windows switches, even wireless smoke sensors.

The attractive styling and unobtrusive size of Securityguard sensors allows them to blend into the background whilst they protect your home and business.

))) "Alarm from Sensor, check for forced entry"

DOORBELL AND CHIME

One of Securityguard's simplest yet best-loved features is the doorbell and chime option.

Add an optional Doorbell transmitter and the main unit turns into a doorbell chime. Or you can program the Chime mode which allows the use of your sensors as a shop door minder.

))) "Ding Dong."

POWER SAVINGS

Securityguard III is the 'greenest' alarm system ever made - it uses less than 1% the power of normal alarm systems.

The main unit is self-powered and can go for months without recharging - it even speaks up to tell you when it needs topping up.

))) "Low battery in main unit. Plug in battery charger for twenty-four hours."

PROFESSIONAL INSTALLATION

There are no wires to install, not even mains power. Your qualified & Licensed installer will program the system according to your specific requirements.

SIMPLE PROGRAMMING

Our installer will program the system to meet your requirements. Add extra sensors, adjust delay timers, modify the voice announcements and much more. All programming is by Radio Key with step by step assistance from the scrolling LED display.

))) "Step by step voice instructions."

SecurityGuard III

MAIN UNIT Unique Features

15M PIR MOTION SENSOR

Securityguard III lives up to its all-inclusive design philosophy. The onboard motion sensor can detect motion in an area up to 15m in length and width. You can easily add extra detection devices to cover even more rooms.

GSM MONITORING

Securityguard III is ready for alarm monitoring. The onboard GSM communicator has two way voice capability for the reassurance of voice feedback from your central monitoring station.

6 CHARACTER SCROLLING LED DISPLAY

The large and bright scrolling display provides system status and information in clear easy to understand sentences. Coupled with Securityguard's voice prompts, there are absolutely no confusing symbols or abbreviations to interpret. It's easy!

VOICE PROMPTS

Securityguard III actually speaks to the user to report on system status and advises on action to take. Securityguard can even speak in different languages such as Dutch, German, French to name but a few.

THE FRUGAL PROTECTOR

Securityguard III is a power miser! The main unit runs off its own internal battery for up four months without recharging. This makes Securityguard III extremely cheap to run but also means it can be used in places where mains power is not regularly available such as caravans, building sites, mobile homes and vehicles.

GENEROUS "EXPAND-ABILITY"

Securityguard III has plenty of room to grow. You can add up to 24 extra Radio Keys and Sensors - which should be enough to provide a Radio Key for every member of the family and a sensor in every room. See the full range of accessories below.

PROFESSIONAL INSTALLATION

SECURITYGUARD III solves the growing problems of the time and expertise required for installation. No other alarm system in the world offering comparable security is easier to install than Securityguard III.

EXTRA LOUD SIREN

Securityguard III has an extra loud 124dBm siren onboard to deter would-be intruders and disorient burglars. You can add an optional wired or wireless sirens for extra alerting outside or in another part of the house.

HIGHEST SECURITY

Securityguard III's ancillary equipment is just as sophisticated as the main unit, each using the latest microprocessor technology. The Radio Keys utilise a proprietary encryption algorithm to completely remove the risk of code duplication by would-be intruders

The Securityguard **RADIO SIREN** is a self-contained internal siren for extra noise deterrent in remote parts of the building. The Radio Siren has a wireless link to the Securityguard, (requires power locally but no other wiring).

If PIN codes are your preference, the Securityguard **RADIO KEYPAD** is a portable (or wall mounted) unit with 15 user codes to arm and disarm the system and trip the panic alarm.

The Securityguard **RADIO SMOKE DETECTOR** enhances your existing smoke detectors with a wireless interface to the Securityguard as well as a high-volume siren on board.

Optional Wireless Accessories

Securityguard **RADIO KEYS** are your rugged and waterproof personal remote controls. Add one for every member of the family!

The Securityguard **RADIO DOORBELL** transmitter chimes at the main unit for an extra level of convenience.

With Securityguard **RADIO REED SWITCHES** protecting doors and windows you can walk freely around the house with the system armed in Home mode. Now that's smart!

Add additional **RADIO MOTION SENSORS** in every room you want to protect. Securityguard Radio Motion Sensors have a 90° field of coverage with 15m detection range. The vertical Creep zone even detects motion directly below the sensor. As well as alarm signals, the sensors send supervision signals and low battery signals to the Securityguard main unit.

THE NESS STORY

When you choose products from Ness you are selecting from a range of the very best equipment available anywhere in the world. All Ness-designed Security, Automation or Power Control products are manufactured in Australia, by Ness, using the modern technology and techniques which have established Ness as a world class manufacturer.

The SECURITYGUARD III is manufactured on the latest technology SMT Lines with strict process control and adherence to Ness' ISO9001 Quality Assurance Program - all which ensures a consistent and reliable product in the field.
